

$u = m \Lambda_C(i_{c*}y) \in H_{(q)}^q(W)$
 algebraic when $B(W)$ holds; $f \cup u = i_{c*}y$

i_{c*} : Gysin,
 then Λ_C

restrict:
 $u|_{W_t} = \xi_t$

$\int_{W_c} u \cup w = \int_{W_c} y \cup w, w$ invariant

Lemma 16.24: ξ_t algebraic for uncountably many $t \implies d\xi_t$ algebraic for every t
 so the CM points alone never suffice; $B(W)$ supplies the global class u instead (Thm. 16.25)
