

Serre duality: $\text{Ext}^k \cong (\text{Ext}^{8-k})^\vee$, and $r_k = r_{8-k}$

■ even k

■ odd k

$r_k = \dim HT^k \lrcorner \omega$

$$\sum_k r_k = 1488, \quad \sum_k (-1)^k r_k = 112 \neq 0$$

$$\chi(E, E) = \int_Y \text{ch}(E^\vee) \text{ch}(E) = 0 \text{ balances the pans}$$

so the odd side exceeds the Hochschild bound 688
by at least 112, and $e_1 + e_3 \geq 400$
when $\text{Ext}^{<0}(E, E) = 0$
